Scanned Document Sample

This document is a free sample PDF from ConvertICO. Use it to test PDF viewers, converters, compressors, text extraction, printing and upload forms. It contains real text (selectable and searchable), headings, a table and page numbers, so tools have something meaningful to work on.

PNG - Lossless raster format with full alpha transparency. Ideal for logos, screenshots and graphics with sharp edges.

JPG - Lossy raster format built for photographs. Small files, no transparency, quality drops each time it is re-saved.

WebP - Google format with lossy and lossless modes, alpha and animation. Usually 25-35% smaller than JPG at similar quality.

AVIF - AV1-based image format with excellent compression, HDR and wide colour support. Slower to encode than WebP.

ICO - Windows icon container that stores several sizes (16 to 256 px) in one file. Still the standard for favicon.ico.

SVG - XML vector graphics that scale to any size without blur. Text-based, so it compresses well and can be edited.

GIF - Old 256-colour format that survives because of animation support. Large files compared to WebP or MP4.
